

# PQM II Retrofits

Replace PQM, MPM, and MTM Plus meters with the PQM II Power Quality Meter

The PQM II Power Quality Meter further improves upon the metering, recording and communications functionality of the earlier generation devices including the PQM Power Quality Meter (discontinued 2013), MPM Motor Protection Meters (discontinued 2013) and MTM Plus Meter Transducer Module (discontinued 1998).

The PQM II is an ideal choice when continuous monitoring of a three-phase system is required. It provides metering for critical asset and system parameters such as current, voltage, real and reactive power, energy use, cost of power, power factor and frequency. Furthermore, programmable set points and 4 assignable output relays provide control functionality for specific applications. This includes alarms for over/under current or voltage, unbalance, demand based load shedding, and capacitor power factor correction control. More complex control is available using the 4 switch inputs that can be used for status indications such as breaker open/closed, flow information etc.

## Key Benefits

- Increased metering recording functionality including Voltage Disturbance Recorder (VDR) to monitor voltage dips (voltage sags) and voltage spikes (voltage swells) with capacity for 500 sag/swell events.
- Alarm trigger from any assignable output
- Easy integration to DCS or SCADA systems with standard Modbus and DNP 3.0 Communications Protocol
- Compatible with GE MultiNet Serial to Ethernet Converter
- Versatile mounting options for easy installation
- Easy to use keypad and large illuminated display
- Flash upgradable for future requirements

## Applications

- Commercial, Industrial and Utility Power Quality Applications for medium and low voltage systems
- Metering and asset monitoring of distribution feeders, transformers, generators, capacitor banks and motors
- Specialized control applications for demand load shedding, power factor, etc.
- Monitoring of assets in challenging Industrial environments

## Monitoring & Metering

- Current and Voltage measurements ( $I_a$   $I_b$   $I_c$   $I_n$ ,  $V_a$   $V_b$   $V_c$   $V_{ab}$   $V_{bc}$   $V_{ca}$ )
- $V_l$  unbalance
- True PF Crest and K factor
- Hz, W, VAR, VA
- Wh, VARh, Vah, W cost
- Demand: W VAR VA
- Power Factor- Disturbance recording and waveform capture
- Harmonic analysis through 63rd with THD and TIF
- Event Recorder – up to 150 events
- Data Logger – up to 98,000 events
- Voltage Disturbance Recorder (VDR) – up to 500 events

## Communications

- Front RS232 serial port
- Two rear RS485 serial ports with Modbus and DNP 3.0 protocol
- Ethernet connectivity via MultiNet
- Software based setup and monitoring with EnerVista™

## Protection & Control

- Unbalance: A, V, W, Var, VA, Varh, Wh, PF, Hz
- Demand: A, W, Var, VA
- Load shedding
- Power factor control
- Pulse input totalizing
- Capacitor Bank Switching

Note: The EnerVista PQMII Setup software can convert settings files for PQM Meters using firmware version 3.6x or newer.

For further details on the PQM II Power Quality Meter, visit GE Multilin's web site at [www.GEMultilin.com](http://www.GEMultilin.com) where you can download the PQM II brochure with complete order codes, the PQM II instruction manual, and details about EnerVista suite of setup and monitoring software tools.

## Ordering the PQM II Power Quality Meter

For the full benefits of upgrading to the PQM II, the order code PQMII-T20-C-A is recommended.

### PQM II Options

Note: PQM order code options are the same as for PQM II, with additional features included in the PQM II meter.

**T20:** Transducer option; 4 isolated analog outputs 0 – 20 mA and 4 – 20 mA, 4 – 20 mA analog input, 2nd RS485 port

**T1:** Transducer option; 4 isolated analog outputs 0 – 1 mA, 4 – 20 mA analog input, 2nd RS485 port

**C:** Control option; 3 additional programmable output relays (total of 4), 4-programmable switch inputs

**A:** Power analysis option; harmonic analysis, triggered trace memory waveform capture, event record, data logger, voltage disturbance recorder (VDR)

**Control Power:** Standard: 90 – 300 VDC/70 – 265 VAC

### Modifications:

- MOD 501: 20 – 60 VDC/20 – 48 VAC
- MOD 504: Removable terminal blocks
- MOD 525: Harsh Environments Conformal Coating

### MPM Options

The MPM can be replaced by PQMII-T1 or PQMII-T20, however, we recommend PQMII-T20-C-A. For low control power, MOD 501 is available.

**MPM:** Basic unit, all current/voltage/power measurements, 1 x 269/269 Plus Comm port, Fail-safe Form C Output Relay

**LO:** 20 – 60 VDC, 20 – 48 VAC 50/60 Hz

**HI:** 90 – 300 VDC, 70 – 265 VAC 50/60 Hz

**A1:** Four 0 – 1 mA analog outputs

**A20:** Four 4 – 20 mA analog outputs

### MTM Plus Options

If required, a PQM II mounting plate is available in order to replace an MTM Plus meter.

**120:** 90 – 140 VAC

**240:** 200 – 260 VAC

**S:** Separate Power

**P:** PT Power

**A01:** 0 – 1 mA

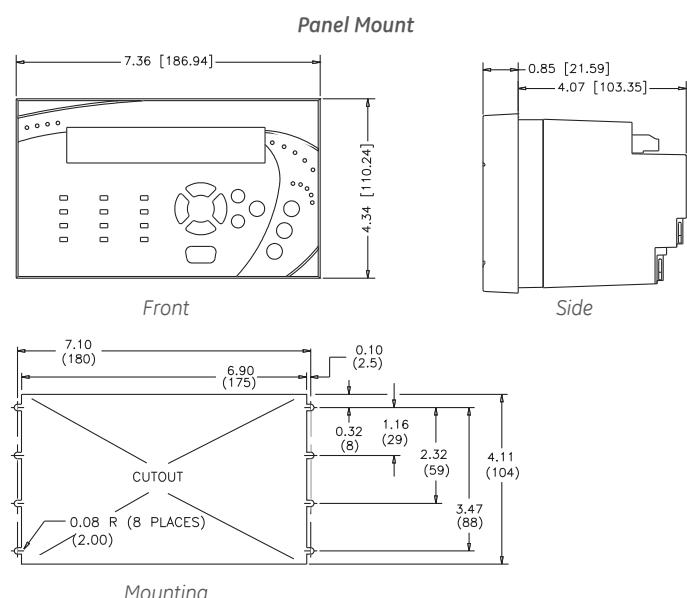

**A20:** 4 – 20 mA

## MPM/PQM/PQM II Dimensions & Mounting

For ease of replacement, dimensions and mounting remain the same for the PQM II as for the PQM and MPM meters.

## MTM Plus Dimensions & Mounting

Note that the MTM Plus does not have the same dimensions as the PQM II. If required, a PQM II mounting plate is available to replace an MTM Plus meter. Otherwise, panel modifications may be required during retrofit.
