General Information

The JVW-5C is manufactured in GE's Clearwater, FL. plant utilizing state of the art Automated Pressure Gelation (APG) processes and Hydrophobic Cycloaliphatic Epoxy (HCEP) for the entire line of outdoor voltage transformers. Insulation levels meet or exceed those specified in IEEE C57.13 and CSA CAN3-C13.

Dimensions meet IEEE C12.11. Every model has been thoroughly design tested to withstand repeated thermal shock and a modified salt fog test per IEEE standard 4. Superior designs, HCEP epoxy, and APG processes are combined to create a superior product. Benefits of HCEP over CEP include lower leakage currents, lower flashover probability, less discharge activity, less erosion from ultra violet (UV) radiation, enhanced thermal cycle resistance, and ultimately better reliability and improved life expectancy.
