**Notes:**

(1) For continuous operation, the transformer-rated primary voltage should not be exceeded by more than 10%. Under emergency conditions, over-voltage must be limited to 1.25 times the transformer primary voltage rating.

(2) ANSI 69 Volt burden.

(3) This transformer is similar to Catalog Number 764X021011 except for the voltage rating of the fuse.

(4) For Y connections, it is preferred practice to connect one lead from each voltage transformer directly to the grounded neutral, using a fuse only in the line side of the primary.

By this connection a transformer can never be "alive" from the line side by reason of a blown fuse on the grounded side.

(5) This transformer is similar to Catalog Number 765X023011 except for the voltag rating of the fuse.
