

CONFIDENTIAL & PROPRIETARY

To: Telecom Supervisor, Engineering and Procurement agents  
[Critical Infrastructure Communications \(CIC\)](#)

GE Vernova announced the discontinuance of its JungleMUX SONET & T1 and TN1U/TN1Ue SDH & E1 Multiplexers December 1<sup>st</sup>, 2022 [here](#).

### **JungleMUX SONET/T1 and TN1U/TN1Ue SDH/E1 customers,**

With less than a year before Lentronics Multiplexers are discontinued and no longer commercially available for purchase, this note serves as a reminder to users. Please be prepared in the following ways:

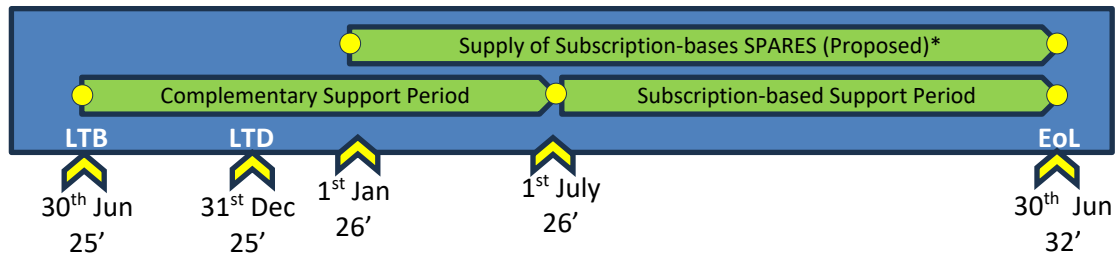

- Evaluate equipment SPAREs needed to maintain your company's existing Multiplexer networks over GE's 7-years of post-obsolescence support (use [Appendix B](#))
- [Schedule a meeting](#) with GE's technical support teams to understand our drop-in migration strategies to [JPAX](#) and/or [JPAX-H](#)
- Seek help from [GE](#) via your regional sales manager to have GE mine traffic from your existing Multiplexer network to further simplify Traffic migration to JPAX / JPAX-H.
- Be aware of our [modified support services](#) offered after the June 30<sup>th</sup>, 2025.

### **Important Dates**

1. **June 30<sup>th</sup>, 2025:** Last Time Buy date (LTB) for all affected Lentronics Multiplexer products (see below for some unit exceptions) at which time GE will transition into a 'Support' period\*, providing customers with ongoing technical phone & field support, and unit repair & return services for as long as these components remain available and economically viable (7 years planned\*). Design of new products and features will be limited to sustaining activities, including fixes for critical vulnerabilities.
2. **December 31<sup>st</sup>, 2025:** Last Time Delivery date (LTD) for affected products.
3. **January 1st, 2026:** Commencement of a proposed (\*) subscription-based product sparing program.
4. **July 1st, 2026:** Commencement of a subscription-based Technical support contracts (see below for changes to GE's support model).
5. **June 30th, 2032:** End of product Life (EoL) and all Sparing & Technical support programs.

### Lentronics Multiplexer Support Timeline for affected Products

### Last Time Buy Exceptions

- **B86900-01** Evolution Module,
  - SFPs (**90010/AA, -BB and -CC**), and
  - CBW cables (all lengths) (**035-86430-70 to -79**)
- **B86429-xx** Direct Transfer Trip Test Panel (24V, 48V and 130VDC) and all cables / cabling harness
- **86485-99** CBUS to JPAX Paddleboard
- **86430-53** Computer Cable Kits, cable (**84910-05**) and Adaptor (**84910-06**)
- Spacer Panels (**PB885997**) and with removeable front (**PB000086**)
- **86456-xx** VistaNET NMS and all premium components

For these exempt products, the current support model will remain in affect. Refer to [Changes to Product Support Model](#) below. For lifecycle planning purposes, [Appendix B](#) contain a view towards the complete set of Multiplexer offerings currently available in 2024, and doubles as a subscription-based equipment sparing program. Please examine these pages carefully. We've attempted to define **GE's ongoing strategy for each product** (unit hardware, hardware paddleboard, firmware and software), either suggesting a Sustaining (active), new design (consider), not recommended for new design (NRND) or manufacturer discontinue (MD). The intent of this list is to provide transparency to your team during telecom planning and risk assessment.

## **\* Changes to Product Support Model**

The technical support model affecting Lentronics Multiplexers is changing to reflect changes in the products lifecycle status. Please review these policy changes carefully and discuss with your GE Vernova Sales Manager to assure your organization has the necessary coverage to adequately protect your investment.

**Effective July 1<sup>st</sup>, 2025**, the following changes will form GE Vernova's product support policy for all affected Lentronics Multiplexer products:

- **A PROPOSED subscription-based Equipment SPARING Program (ESP)** is being considered for customers who would like to reserve affected Lentronics equipment and defer their shipment across a pre-defined delivery schedule (1 - 7 years). The program proposes that GE will build and hold the desired parts, charging a 'carrying cost' invoiced annually over this schedule. Refer to [Appendix A](#) for an example of how the program may work. Delivery of held equipment will be controlled by the customer.

If there's customer interest for the ESP program

- SPARING orders will be accepted up to June 30<sup>th</sup>, 2025.
  - GE may additionally offer 'built nodes' at a price that's reflective of the effort.
  - A modified form shown in [Appendix-B](#) will be used by customers to specify desired part quantities and delivery duration.
  - **Please contact your regional sales manager if interested in participating in this program, on or before Oct 30<sup>th</sup>, 2024**
- **A New subscription-based Technical Phone & Field Support Program (TSP)** will be required for all customers requiring technical phone and field support\*. Phone support had been offered at no charge prior to discontinuance however that model is not sustainable after June 30<sup>th</sup>, 2025. To assure GE can continue to attract & retain qualified technical staff to support these products after discontinuance, customer participation is required.
    - Customers who opt-in to this program will also have access to 1-week of on-site technical support annually.
    - Customers who have an existing and valid Platinum professional Support contracts have by default opted-in to this program at no additional charge (excluding the additional week of onsite support).
    - Customers who are actively migrating to JunglePAX (-X or -H, see below) have by default opted-in to this program at no charge (excluding the additional week of on-site support).
    - **Please contact your regional sales manager for pricing and terms associated with this program, on or before July 1<sup>st</sup>, 2026.**

\* Product outside their warranty period (even those exempt from this lifecycle statement) shall also follow these new TSP support guidelines.

Note: There are no planned changes to the existing Repair-and-Return support program.

- Repair-and-Return of failed Lentronics equipment will be available to all customers for 7 years after discontinuance based on GE's ability to repair affected products over this full period. Refer here for all obsolescence advisories ([JMUX](#), [TN1U](#) and [TN1Ue](#)).

### **Migration Strategies**

**In response to this discontinuance**, GE has been investing heavily in the development of our second generation optical platform [JunglePAX](#) (JPAX-X) and [JunglePAX-H](#) (JPAX-H). Both JPAX products are designed to be interoperable and positioned as a drop-in replacement for JMUX and TN1U/Ue nodes. Built with equivalent hardening, dependability, and performance, JPAX offers a unique proposition to SONET/SDH Multiplexer users: **invest in JPAX today for all new network deployments**. New stations, modernization of existing stations or depreciated communication assets slated for a refresh can safely and reliably deploy JPAX in place of a Lentronics Multiplexer node. Following this approach, operators can focus capital and operational resources towards 'self-paced' migration strategies, selectively replacing nodes or rings of nodes at a time instead of a whole-sale network-wide replacement. **Inserting JPAX node(s) are exceptionally efficient, cost effective, fast to deploy while preserving critical and time sensitive application performance across platform boundaries.**

**GE is recommending two mitigation strategies:**

1. **Node-by-Node upgrades to JunglePAX** for new node purchases and/or network modernization initiatives. This solution uses [GE's Evolution module](#) to interlace a JPAX node within an existing JMUX/TN1U/Ue ring, in instances where just one new substation is being energized or modernized. Customers should leverage GE's Analysis and Design expertise to simplify traffic integration, reducing cost and improving accuracy of adding a new JunglePAX nodes into your overall design.
2. **Ring-by-Ring upgrade to JunglePAX** that also employs [GE's Evolution Module](#) to optically tie Multiplexer networks to JunglePAX via dual-homed nodes for improved resiliency. Evolution Modules use GE's Hybrid Technology to tie 1G Ethernet and TDM traffic concurrently over the same fiber without the need for packetization / TDM emulation.

By strengthening interoperability between JungleMUX/TN1U and JunglePAX, this enables [seamless traffic migration and assure application performance](#) between the platforms, especially those critical and performance-sensitive applications such as Teleprotection. JunglePAX offers a modern communications solution that requires fewer parts, a simplified architecture and network management, and a stronger security posture than the JungleMUX platform, while maintaining the harsh ruggedness and fanless operation certified to IEEE 1613, IEC 61850-3 and IEC 60834-1.

Our SONET and SDH Multiplexers have been widely deployed across all regions of the globe with tens of thousands of nodes deployed. Many customers continue to rely on these products for secure and dependable communications and can be assured that JunglePAX, as a replacement product will uphold those same fundamentals. We also often find that customers are challenged with an array of life-cycle support tasks ranging from analysis, design, migration, order engineering, system configuration & testing as well as operational staff training throughout the lifecycle of JungleMUX products. GE has taken this opportunity to reposition our **Professional Service offerings** to address this growing need.

Please visit our [website](#) for more information.

Yours truly,

---

Appendix A

PROPOSED Subscription-based Sparing Program

GE's equipment sparing program is evolving to help customers with options to distribute the capital costs of buying necessary Multiplexer equipment over multiple years. As part of this PROPOSED program, customers may pre-purchase a desired quantity of loose JMUX, TN1U and TN1Ue parts and define a flexible delivery schedule over 1-7 years (user defined). This program therefore allows customers to buy what they think they'll need to prior to the LTB date without the burden of receiving and storing that stock for an extended duration. Instead, GE would consider holding and protecting this finished goods inventory in lieu of a nominal carrying cost (% determined by volume), invoiced annually based on the remaining value of that stock.

Proposed Advantages

- Assures sufficient quantity of parts to maintain network continuity after GE's LTB date.
- Enables customers to respond to unplanned network expansion (building new nodes) and/or repair damaged nodes after GE's LTB date.
- Reduces the risk of storing stock at customer sites where sub-optimal environmental conditions may exist over extended duration.
- Frees up capital that would otherwise be tied to a fixed, under-utilized asset.

This proposed program acts as an insurance policy to protect customers as-build networks, extending your companies migration 'runway' while next generation technologies are considered. As way of an example, the proposed program may be administered in the following way.

## Example

Joe's a network engineer tasked with replacing his company's JungleMUX network. Like most communications engineers, his responsibility extends well beyond supporting just this equipment. Joe's considering migration options and estimates that a full transition to JPAX or JPAX-H technology will take 3 years. Joe's received a recent network audit from GE's technical support team and through that engagement, is confident that their JMUX network is robust, reliable and will remain dependable over that period. A few new substations are planned in the future but exact timing is unknown.

Joe carefully makes arrangements with GE to buy loose JMUX equipment, consisting of sufficient parts to build a few new nodes, and sufficient spare equipment to support their critical teleprotection services. A PO is raised for \$20,000 with a delivery schedule of 3 years.

### **Upon receive of the PO with acceptable terms, GE then:**

- builds and stocks Joe's inventory, valued at \$20,000.
- inform Joe that the stock is available for shipment within 1 business day.
- sends an invoice to Joe for \$3000 to carry this full inventory for the coming year (15% of \$20,000 used in this example).
- Joe has no need for this equipment and continues with high priority tasks.

### **At the start of the 2<sup>nd</sup> year, GE then**

- sends an invoice for \$3000 to carry this full inventory for the coming year.
- Joe still has no need for this equipment and continues with high priority tasks.

Halfway through that year, Joe needs to build a full node to fulfill an unplanned substation refit project. \$8000 worth of equipment as shipped overnight to Joe based on his urgent request.

### **At the start of the 2<sup>nd</sup> year, GE then**

- sends an invoice for \$1800 to carry the remaining inventory for the coming year  $(\$20k - \$8K) * 15\%$ .

Also during that 2<sup>nd</sup> year, Joe requires a few selective JMUX parts for new communication circuits valued at \$2000

### **At the start of the 3<sup>rd</sup> year, GE then**

- sends an invoice for \$1500 to carry this full inventory for the coming year  $(\$12k - \$2K) * 15\%$

### **At the end of the 3<sup>rd</sup> year, GE then**

- Contacts Joe and asks if he'd like GE to continue to carry the remaining \$10,000 of equipment for another term, or deliver the remaining parts (triggering an invoice for \$10,000)
- Joe's been busy and has already replaced a number of his existing JMUX nodes with JPAX and JPAX-H, and instead of taking delivery of the remaining \$10,000 of JMUX equipment, chooses instead to continue to interoperate JPAX with his remaining JMUX nodes.
- Joe considers his options, and cancels his contract with GE, possibly gaining a partial sales credit for the remaining value of the equipment which is applied to GE's JPAX or JPAX-H gear.

---

Appendix B  
Parts List for Ordering Spares
